Engaging, Interactive & Informative...

ScanLink is a mobile engagement platform that enables anyone to create, measure and deliver multimedia content including videos, pictures, text, documents, web links and more to smartphone and tablet users via mobile interactive codes.

Visitors simply scan a code featured at the site with their own smartphone or tablet to instantly access content.

It's simple, low cost and available to everyone.

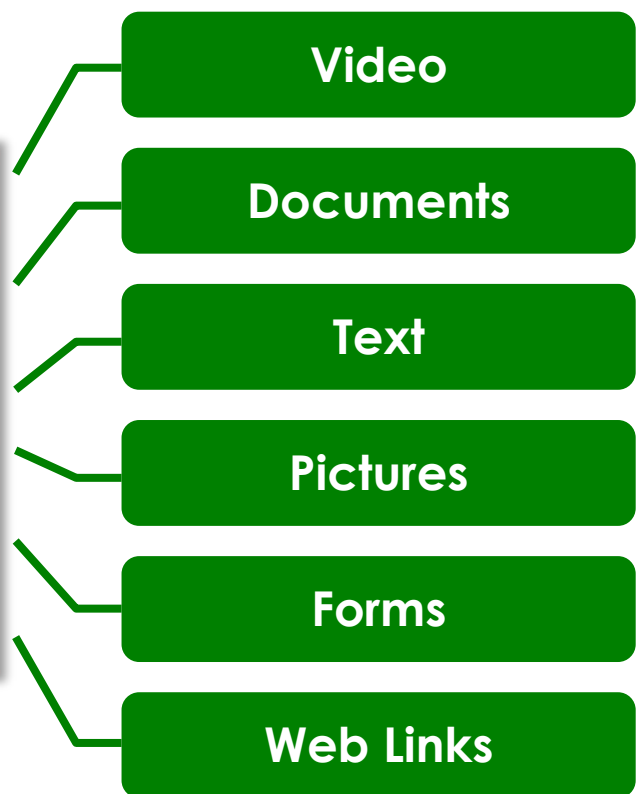

GALA TECHNOLOGIES

Imagine if our monuments and memorials could tell a story...

Where visitors could use their own mobile device to instantly engage through video, pictures, documents, web links, social media and more. Where people could instantly become a registered supporter or even make donation on the spot.

It's all possible right now with ScanLink

You're in control

User-friendly tools enable you to instantly create and edit your own content - No computer programming skills required. **It's easy!**

Any device

ScanLink is not a device restricted software application.

The platform utilises cloud mobility to store and serve your content providing access to multiple types of smartphone or tablet devices on demand.

Powerful Analytics

A comprehensive suite of analytics tools record engagement, user data and trends.
